OUR VISION:

Our vision is help manufacturing companies and the teams of hard working people that run them to realise their full potential. We believe that every business is built on the people within it and the decisions they take on behalf of the business. Empowerment of people with accurate, real time and relevant information is at the core of these decisions.

Insight has been designed to help your people visualise, analyse and optimise information that can help them with their everyday decisions delivering better performance.

INSIGHT

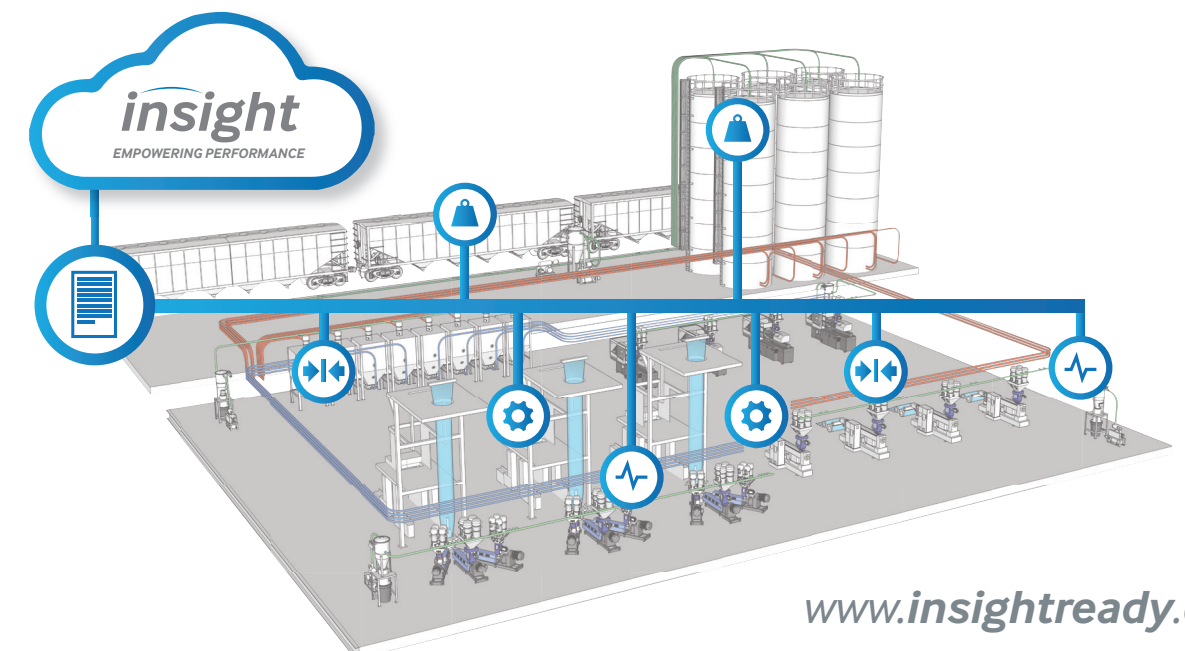

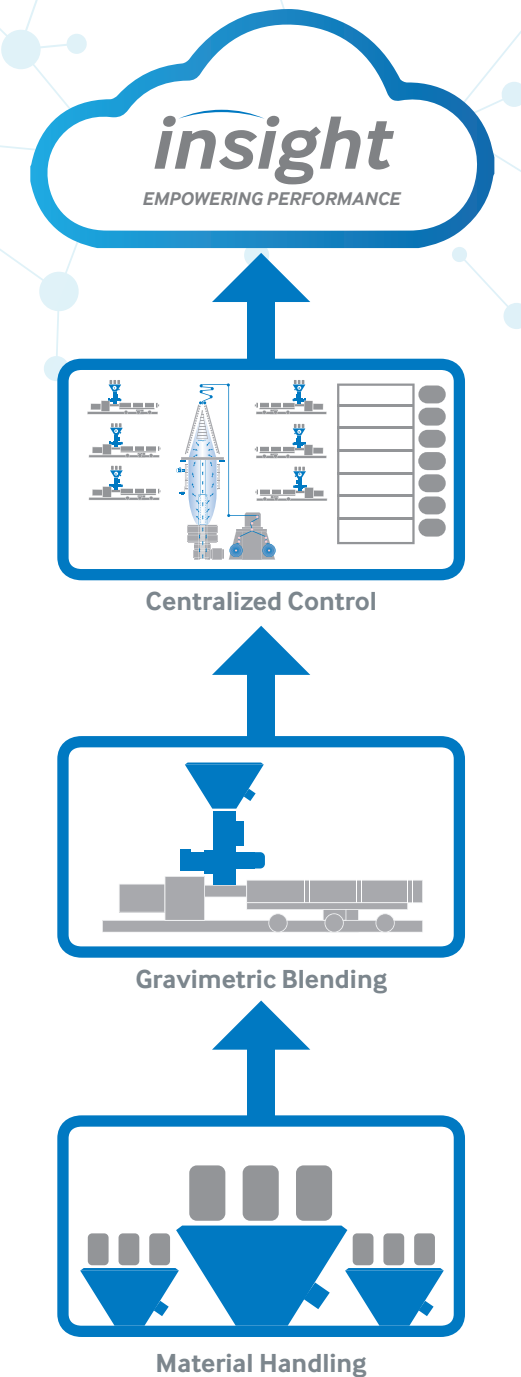

Empowering Performance

INSIGHT is a new way of connecting devices, production lines and plants to each other via the internet. This is now possible due to the availability of low cost devices and affordable network processing and communications.

The **INSIGHT** Platform enables scalable, high-level, cloud based data processing of devices, production lines and plants, and provide full visualisation and analysis of overall plant /line performance.

INSIGHT can expand to as many devices and locations as required.

Through a common platform it is possible to analyze vast quantities of data to produce information, diagnostics and analytics to assist positive decision making. **INSIGHT** allows for the visual management of connected products, regardless of type, location and time. This provides increased measurable value to plastics producers across all critical plant and business metrics which will contribute significantly to the bottom line.
