- 44" x 44" Foot Print
- Stacking Pads
- 45 or 60 Degree Hopper
- Manual Slide Gate
- Forklift Pockets
- Many Options to Fit Your Process Requirements

Mobile Storage Bins are designed for heavy-duty applications. They feature a robust steel frame and a large hopper for efficient material storage and dispensing. The bins are built to last, with a 44" x 44" footprint and a capacity of 10-60 cubic feet. They are equipped with manual slide gates and forklift pockets for easy handling in a warehouse or industrial setting. Many options are available to fit your specific process requirements.

These bins are ideal for storing a wide variety of materials, including powders, granules, and pellets. They are designed to be stackable, making them a space-saving solution for your facility. The heavy-duty construction ensures they can handle the weight of the material and the rigors of industrial use.

For more information on our mobile storage bins, please contact us at www.tsm-controls.com. We are committed to providing high-quality solutions for your gravimetric blending and control needs.
